JCW Floor Screeding - Mainbuild

## Arup Building, Cambridge University.

JCW have recently completed the installation of floor screeding as part of recent refurbishment works to the iconic Arup building of Cambridge university, home to the Museum of Zoology.

The building is to undergo "The complete renewal and refurbishment of the building in an architecturally sensitive way – restoring the integrity of the original design whilst giving the building a new future."

The Arup Building is a twentieth century design icon – one of the best examples of brutalist architecture in Cambridge. Originally envisaged as the first part of a much larger plan to redevelop the New Museums Site and link it to the city centre, it was a demonstration of ambitious engineering.

JCW have been involved with phase one of the three phase project. The first phase includes the creation of new stores for the Museum of Zoology, allowing them extra space for their collections. The second phase involves the revamp of the museum display areas along with the creation of a new public café at podium level, a new museum entrance and a new home for the iconic finback whale.

### Artist's Impression

### Floor Screeding

JCW installed a 75mm pumped screed to the floors of the Arup building.
